

# Vacation is over, and you are still tired?

Could the reason  
be an altered  
blood count?

In September, the Blood Cancer Awareness Month, we emphasize the importance of an early discovery and treatment of blood diseases: when recognizing symptoms, it is important to persist in getting an appointment with your doctor as soon as possible, as a timely discovery enables successful treatment. And when re-entering society, patients face numerous challenges.

We invite the media to cooperate in raising awareness of the burden of blood diseases while we announce the following activities:

date	activity
Tuesday, August 30, 11 a.m.	<b>It is important to recognize, discover, and treat blood diseases in a timely fashion</b> Press conference as the introduction to the Blood Cancer Awareness Month Campaign 2022
